DETAILED ACTION***Allowable Subject Matter***

Claims 2-4 and 8-12 are allowed. The following is an examiner's statement of reasons for allowance:

Regarding claim 8, means for commanding and controlling a component, by creating a computer program using a microcomputer coupled to the component, are known in the art. Also known in the art are graphical programming implementations that comprise a spreadsheet or grid having a plurality of cells, whereby a user may create a computer program by placing rectangular-shaped graphical symbols, each representing a function or a link between functions, within the cells of the spreadsheet. Programming languages, and particularly compilers associated with such languages, often comprise a syntactic and semantic checker to check whether a user-constructed program complies with certain syntactic and semantic rules. The prior art, however, does not teach that these graphical symbols, which used to create a computer program, are universal; that the computer code corresponding thereto may be implemented with an arbitrary one of a plurality of computer languages. Consequently, the prior art does not teach associating such graphical programming languages, which may be implemented by a microcomputer in order to create a program to control a component, with a library of graphical symbols of at least two graphic languages, as is expressed in claim 8.

As claims 2-4 and 9-12 depend on claim 8, and include all of the limitations of claim 8, each claims 2-4 and 9-12 are considered allowable for the reasons in which claim 8 is allowable.
